This is a large 5-bedroom house arranged over 4 storeys. The basement has entry on two sides allowing a stepped access onto the rear garden. The main house was constructed in a short time period and offers a large area of accommodation for the homeowners.

The owners wanted to have the house appear as a traditional building from the front, but when viewed from the rear they wanted the appearance of a modern extension. The builder was able to easily achieve this with a variety of cladding effects, which are striking to say the least.

The builder, Andrew Mason of AMPM construction, said *"we met Polarwall at a trade show, and were very impressed with what we saw, we visited another build in our area and having chatted to the builder were convinced this was the way to go"*. Andrew who is also going to be the homeowner added, *"we were really pleased with the excellent service we got from Polarwall, they were helpful when we needed information and were always able to deliver what I required."*

Key facts

- Core size Basement 251mm
- Core size Above ground 155mm
- Insulation Standard - 0.27W/m²K
